

## **Northwest Community Hospital**

Northwest Community Hospital opened its doors in December of 1959 as the result of an enormous, grassroots community effort to bring a hospital to this community. Today we are one of the largest hospitals in the State, having grown from 110 beds to close to 500 beds. We are the professional home to approximately 4,000 employees, and 1,100 doctors and are supported by another 800 volunteers from this and the surrounding communities. We now see more than 26,000 hospital admissions and 250,000 outpatient visits each year. This growth has not happened without close work and coordination with the professional staff of the Village of Arlington Heights. Recognizing that growth can be complicated,

they have performed well at balancing the promotion of our development with sound anticipation and management of the unintended consequences that can occur with such growth. It is a pleasure working with such professionals.
